ASEAN Open Skies: Importance of Regional Cooperation in Search-and-Rescue

Tsjeng Zhizhao Henrick
Associate Research Fellow, Maritime Security Programme

ASEAN is looking to liberalise its airline and aviation market with an “ASEAN Open Skies” agreement. Slated to be in place by 2015, it aims for a single aviation market in ASEAN. This is in line with the implementation of the ASEAN Community 2015, which seeks to deepen intra-ASEAN integration and herald a new chapter in the regional group’s evolution. It would no doubt go a long way towards greater economic integration among ASEAN member states, notwithstanding the setbacks posed by the tragedy of the Malaysia Airlines flight MH370.

MH370 might have cast a pall over the aviation market in ASEAN initially. Yet, public confidence in the airline industry in the region remains steady despite the initial shock and worry of its possible negative impact. Arising from this episode, there is a need to further enhance regional search-and-rescue cooperation to prepare for major incidents in future.

Expanding aviation facilities and fleets is only part of the story. Air traffic is likely to rise significantly if and when the Open Skies Agreement is implemented, implying the need for search-and-rescue (SAR) cooperation to increase commensurately to cope with this expected increase. The MH370 incident has made abundantly clear the necessity and urgency of such collaboration. Already, the incident has drawn many countries in the region to contribute to the effort, the scale of which has been deemed unprecedented.

MH370 has also thrown the spotlight on the necessity of a coordinating centre. The Information Fusion Centre at the Changi Command and Control Centre participated in the search operation. Meanwhile, Singapore’s defence minister recently offered to host a Humanitarian and Disaster Relief Coordination Centre. These are positive developments as such assets are essential safeguards with the increased air traffic expected with liberalisation of the aviation industry.

What is worth highlighting is the fact that the countries involved were willing to come together to search for the missing plane, even in the South China Sea despite existing territorial disputes. Moreover, the Indonesian Navy recently held multilateral joint naval exercises which included a SAR simulation.

The MH370 search-and-rescue operation may not have been executed perfectly. Nonetheless, numerous leaders, including the Australian prime minister and Singaporean foreign affairs minister, as well as the US Navy, have praised the SAR efforts. One can see not only a greater willingness to cooperate among ASEAN’s community of nations but also the will of ASEAN countries to focus on SAR, with positive implications for the Open Skies agreement.

MH370 has shown that regional cooperation in SAR will be needed more than ever before, especially if and when the ASEAN Open Skies agreement is implemented. The silver lining from the tragedy may be that the SAR cooperation brought about by the missing plane demonstrates one thing about ASEAN: Despite the challenges faced by the group, it has not only the will, but also the potential to develop the capabilities to meet the challenges of an increase in air traffic.

Tsjeng Zhizhao Henrick is an Associate Research Fellow with the Maritime Security Programme at the S. Rajaratnam School of International Studies (RSIS), Nanyang Technological University. This item is based on a commentary co-written by the author and Benjamin Ho, Associate Research Fellow of the Multilateralism and Regionalism Programme, published on 7 May by the RSIS.

Philippines, US ink defence pact

MANILA: The Philippines and the United States signed an agreement Monday to allow a bigger US military presence on Filipino territory, hours ahead of a visit to Manila by US President Barack Obama. Philippine Defence Minister Voltaire Gazmin and US ambassador Philip Goldberg signed the 10-year pact, which is seen as another element of Obama's effort to focus US military and economic attention more heavily on Asia.

Japan: Strike any N. Korea missile launches

TOKYO — Japan has ordered a destroyer in the Sea of Japan to strike any ballistic missiles that may be launched by North Korea in the coming weeks after Pyongyang fired a Rodong medium-range missile over the sea, a government source said on Saturday. Japanese Defense Minister Itsunori Onodera issued the order on Thursday, but did not make it public in order to avoid putting a chill on renewed talks between Tokyo and Pyongyang, the first in more than a year, local media reported earlier.

Japan's scrambles against Chinese planes hit record high

(Reuters) - Japanese fighter jet scrambles against Chinese planes hit a record high in the year that ended in March, the Defense Ministry said on Wednesday, as Sino-Japanese ties were strained by disputes over territory and interpretations of history. Japan scrambled combat planes against Chinese aircraft 415 times during the year, up 36 percent from a year earlier. It was the highest number since the ministry started disclosing country-specific figures in 2001.
