# MSP PERSPECTIVES

## The AirAsia Search: A Positive Precedent

Henrick Z. Tsjeng

Associate Research Fellow, Maritime Security Programme

The multinational effort to locate the crashed Indonesia AirAsia Flight QZ8501 and recover victims has been largely commended as a success. While not without obstacles, the multilateral efforts led by host country Indonesia contributed to a smooth search. This success can be a positive precedent for future cooperation.

The QZ8501 search operation has been relatively free from the mass confusion and finger-pointing generated during the search for Malaysia Airlines Flight MH370 earlier last year, and is a positive step forward for future cooperation should the need arise again.

A major reason for the success of the search-and-locate (SAL) operation for QZ8501 and the ensuing investigation were the relatively conducive conditions for the recovery of debris and victims, unlike in the case of MH370. Even if these factors were independent of the efficacy of the search efforts by various regional countries, they nonetheless contributed towards a relatively successful international effort.

This is not to say that the search operation has been without setbacks. For instance, bad weather and rough seas slowed the operation, especially at the beginning phase of the search. Moreover, the TNI and BASARNAS were releasing conflicting data at the initial stage of the search as a result of internal coordination issues, which were addressed once President Joko Widodo took on a coordinating role. Nonetheless, the AirAsia search illustrates further the extent to which regional multilateral cooperation has improved since the disappearance of MH370 in March last year.

### Factors Favouring the QZ8501 Search

Firstly, the SAL effort by Indonesia appeared to have been effectively coordinated and was transparent. The Indonesian authorities were quick to produce a search plan which also saw requests for assistance to Australia, Malaysia, Singapore and the United States, among others, and the country was also forthcoming with accepting international assistance. The TNI and BASARNAS, after overcoming initial communication issues, closely coordinated with its foreign counterparts.

The QZ8501 search also saw more transparency, especially on the part of the Indonesian government. In contrast to the opacity and confusion that

characterised the first several hours after MH370 was first reported missing, the Indonesian authorities were more forthcoming in providing information to the parties involved in the search.

Moreover, the search did not see any dramatic politicisation of the incident. In the case of MH370, the tragedy quickly became a thorny political issue, with blame-shifting rife on many sides. Despite the deployment of the controversial KRI Usman Harun by Indonesia during the QZ8501 search, both Singapore and Indonesia did not allow this issue to overshadow their close multilateral cooperation, which continued without any further notable incidents. This demonstrated an important point – that political goodwill can overcome contentions and ease the way for greater multilateral cooperation, in the maritime sphere or elsewhere.

The presence of American, Chinese and Russian vessels dispatched to assist in the SAL operations also demonstrated the willingness of the involved countries to set aside political differences and disputes during cooperation, contribute their assets in the search for the downed plane, and in doing so build goodwill with host nation Indonesia and the other countries involved.

### Way Forward

The search for QZ8501 marks a break from past experiences in the region in which considerations over sovereignty, national security and political differences dampened such willingness among certain parties to cooperate or accept international assistance.

It is a significant step forward for the region towards deeper maritime engagement and cooperation in search operations. It is particularly helpful for building the ASEAN Community, as well as for overcoming obstacles such as the lack of regional support for the Search-and-Rescue Convention and the need to harmonise international air and maritime search-and-rescue regimes.

Even though national considerations that may hamper multilateral cooperation are unlikely to vanish overnight, the goodwill arising from the multilateral search for the AirAsia plane will likely set a positive precedent for future SAL operations.

# NAVAL DEVELOPMENT AND POLICY

SINGAPORE—UNITED STATES | 17 FEBRUARY | CHANNEL NEWSASIA

## US plans to rotate 4 combat ships operating out of Singapore by 2018

The United States Navy plans to have four Littoral Combat Ships (LCS) operating out of Singapore - one at a time - by 2018. These LCS vessels are smaller-sized than destroyers, and are capable of quick operations in shallow waters close to shore such as the waters of South-east Asia, the navy said on Tuesday (Feb 17).
