ASEAN Community 2025 and Beyond

In this first NTS Bulletin of 2024, we present a feature article on the way forward for ASEAN Community 2025, penned by Ambassador Ong Keng Yong, former Secretary General of ASEAN and currently RSIS Executive Deputy Chairman.

In 2015, ASEAN member states **adopted** the ASEAN Community Vision 2025, charting the roadmap for each of its three pillars, towards a resilient and peaceful community through greater integration, inclusivity and connectivity. Nearly a decade has since passed, and it is timely for a stocktake on ASEAN's progress. ASEAN will continue to face challenges navigating a fragmented world, with increasing geopolitical tensions between the US and China and competing claims in the South China Sea.

Looking Ahead

There are four key areas that ASEAN should focus on in the coming decades. Firstly, ASEAN countries should continue to work collectively to ameliorate the impacts of climate change on the region. In 2021, Southeast Asian countries faced high levels of **displacement** as a result of climate-induced disasters – more than 5 million people were affected in the Philippines, 749,000 in Indonesia and 780,000 in Vietnam. ASEAN can address these upheavals by building the blue economy, and minimising the effects of marine pollution and rise in sea levels. There are relevant guidelines and specific **climate goals** to achieve at the national and regional levels.

Secondly, ensuring food security in ASEAN since the major food producers such as Indonesia, Vietnam and Thailand **cannot keep up** with producing crops three times per year. This would mean that more ASEAN states may need to import rice and other food grains, which until now the major food producers in the region have been self-reliant. The sustainability of food security is critical to feed the growing population in Southeast Asia.

ASSISTANCE AND
DISASTER RELIEF

MIGRATION

The third area of focus would be job creation and facilitation of the movement of labour in Southeast Asia. During the COVID-19 pandemic, [unemployment rates](#) spiked, reaching 10.4% in the Philippines, 7.1% in Indonesia, 4.5% in Malaysia and 3% in Singapore. There are areas for progress in terms of creating work for unemployed persons, and developing a system that allows for easier entry and exit of workers across ASEAN. However, further cooperation between governments and agencies in ASEAN is impeded by issues of nationality and competent skills of workers.

Fourthly, improving the education sector. Currently, there is a shortage of teachers in many countries. To address this, ASEAN should tap more into the educational expertise and resources of its member states, and work towards more recognition of relevant qualifications from certified agencies and schools in ASEAN. Furthermore, digitalisation must be deployed as a tool to help people communicate and overcome language barriers and technical competencies.

Reaching the Mass

More can be done in connecting with the people in the region. The [poll on ASEAN Awareness](#) in 2018 found that less than 1 in 5 respondents among businesses and Civil Society Organisations perceived that ASEAN's public communication is effective. The perception among those surveyed is that ASEAN communicates with select groups on the government-level, at large corporations, and among elites.

ASEAN tends to dwell on the big-picture and strategic aspects, such as calling for restraint on overlapping maritime claims in the South China Sea and engaging the major powers of the global stage. While these issues are important, attention cannot be diverted from socio-cultural development to build a resilient ASEAN which will deliver more 'public goods' such as greater connectivity, employment, and social security across the region.

Overcoming the National Ego

Ultimately, more needs to be done in ASEAN community building. Currently, there is still not enough readiness to accept the regional ego, over the national ego. With a strong ASEAN ego, ASEAN can better manage the unfavourable forces out there.

What is essential is the political will and leadership of ASEAN member states to implement the blueprint for the ASEAN Community based on the three pillars. If ASEAN is able to move constructively in this direction, ASEAN will build the foundation for an effective regional resilience to manage the challenges from wider geopolitical competition and rivalry.

Trade disruptions in Red Sea cast shadows on global grain trade and food security

Recent Houthi attacks in the Red Sea have heightened concerns about their impact on global grain trade, given the Red Sea's pivotal role in one-fifth of the global wheat trade. These could lead to "domino effects" leading to increased shipping costs and delays, including a 250% increase in costs of insuring such commodities. Miller Magazine | 27 December 2023

Agriculture and food at COP28: Not just more money

The recent COP28 Climate Summit has finally given due recognition to food and agriculture given the close links between climate change and food production. While the summit saw a big push to operationalise the newly established Loss and Damage Fund, limited attention was given to agriculture in discussions on the said fund. Rather than focusing on drawing from the new fund to promote sustainable and climate-resilient agricultural practices, greater attention is needed instead to mobilising existing funds.

Time for ASEAN to step up to biotechnology in food production

China is reportedly planning to double the land it is using for the production of genetically-modified corn amidst the global rise in food-related supply chain tensions. Such move by an agriculture giant towards the use of biotech crops to produce high-yielding seeds, behooves ASEAN to do so as well to assure itself of sufficient feed and food, and to achieve the goals set out in several recent ASEAN declarations pertaining to sustainable agriculture, climate resilience and food security.

Understanding the farmers' choices and adoption of adaptation strategies, and plans to climate change impact in Africa: A systematic review

The study used a systemic review process to identify 66 articles on farmers' adaptation practices in Africa. While it lauds the dominant practices (crop diversification, planting drought-tolerant varieties, changing planting dates, and planting early maturing crops) as being reliable in the long-run, a gap lies in responding to more extreme climate changes in the coming decades. This calls for more transformative changes involving irrigation infrastructures, crop insurance, further improved varieties, and livelihood diversification, among others.
