A new form of gathering big data, known as earth observation (EO), has been gaining ground in recent years. It involves the use of hundreds of satellites with varied sensors in lower earth orbit, above 400 km from earth's surface. EO has the potential to p

Neil deGrasse Tyson and Ann Druyan

Studying the space economy from three perspectives: (1) the growing space economy, (2) recent developments in Earth observation, and (3) satellites in near-equatorial orbit for environmental purposes. An introduction to future issues and space is also featured. Images below were generated by AI (imagine.art).

Recent Developments in Earth Observation | Shankar Sivaprakasam

There is an urgent need to better understand the environmental phenomena that are threatening populations in equatorial regions: Typhoons, floods, earthquakes, tsunamis, volcanoes, wildfires, pollution, etc., due to climate change and geo-hazards are causing huge damage to societies and huge financial losses to economies. Forecast models exist but with varying phenomena. To improve this situation, new data are necessary. Click to read more.

Erick Lansard holds a Master of Engineering in Aeronautics & Space (1983), a Master of Engineering from Stanford University, and a Karman Fellowship from the Karman Project.

Shankar Sivaprakasam is a technology professional with a degree in Computer Science and Engineering from IIT, Kanpur, India, an Executive MBA focused in Strategy, Operations and Technology from IIM Ahmedabad, and a PhD in Innovation Economics from UTS. He is the founder of Eartheye Space.

Erick Lansard is (Full) Professor of Nanyang Technological University (EEE School). Erick is also (Full) Professor of Nanyang Technological University (EEE School). He has over 3 decades in industry experience holding director-level positions in various projects and organisations, including Alcatel Space, Alcatel Alenia Space, Thales Alenia Space, Thales Research & Technology-France, Thales Solutions Asia, Thales Defense Mission Systems. Erick is also (Full) Professor of Nanyang Technological University (EEE School).

Lynette Tan is CEO of Space Faculty, leading a global platform that works with government, corporations, and education institutions to expand the space economy and leverage space technologies. She has more than 18 years of experience in growing business in the space sector, holds a Master's in Chemical Engineering from Stanford University, and a Karman Fellowship from The Karman Project.

Lynette Tan

Notwithstanding global uncertainty, the space economy grew to US$54 billion and is forecast to reach a trillion by 2040. Fuelled by a global space movement, it stands as a vital economic pillar, offering a unique arena for innovation, experimentation and big data implications. As satellites create a mega data set, bridging the talent gap through a STEM 2.0 revolution and strategic partnerships will be critical for governments and companies racing to unlock the vast potential of the ever-expanding space industry. Recent Developments in Earth Observation | Shankar Sivaprakasam

For the second issue of Science, Technology and Security (STS) Bulletin, we focus on space technologies from three perspectives: (1) the growing space economy, (2) recent developments in Earth observation, and (3) satellites in near-equatorial orbit for environmental purposes. An introduction to future issues and space is also featured. Images below were generated by AI (imagine.art).

The authors’ views are their own and do not represent an official position of the S. Rajaratnam School of International Studies. Articles published in Science. Technology and Security may be reproduced only with prior permission. Please email the editor of STS Bulletin at kk.trajano@ntu.edu.sg

Benjamin Ang and Karryl Sagun-Trajano

Published by the Future Issues and Technology (FIT) Research Cluster, RSIS. This Bulletin comes as a series of articles on science and technology from the angle of national security.

In this Bulletin

Future Issues and Space | Benjamin Ang and Karryl Sagun-Trajano

STS is edited by the FIT cluster and features thought pieces on key emerging technologies, such as artificial intelligence (AI), space, quantum technologies, technology geopolitics, and smart cities. We aim to explicate novel technologies in relation to policy to facilitate discussion, information sharing, and collaboration. In the coming months, we will also publish a commentary on space and its relation and contribution to better public health.
